

SPX-XSP Options Visualizer

Installation Instructions

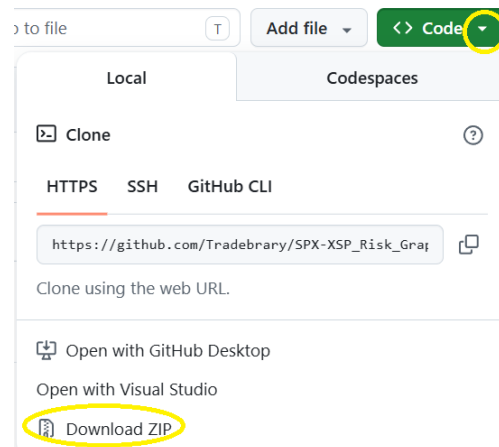

Step 1 — Download the Software

After purchasing on **Whop**, a GitHub page with these instructions should have opened. If that's the case, click the link above where it says **SPX-XSP_Risk_Graph_Visualizer**, as shown in the image below:

or click the download link on your welcome e-mail or on your membership page. It opens the Tradebrary download page on **GitHub**.

Click the green **Code** button at the top right, then click **Download ZIP**:

Extract the downloaded ZIP file (right-click → **Extract All...**) and open the extracted folder. It contains the installer **OptionsRiskGraphSetup-<version>.exe** (for example, OptionsRiskGraphSetup-1.0.0.exe)

together with the documentation.

*Note: If your browser asks whether to keep the downloaded file, choose **Keep** — browsers show this for any download that contains an installer.*

Step 2 — If Windows Shows a Blue “Windows protected your PC” Screen

The first time you run the installer, Microsoft Defender SmartScreen may show a warning because the application is new and not yet widely downloaded. This is a reputation notice, not a virus detection.

Click **More info**, then click **Run anyway** to continue.

Step 3 — Run the Installer

Accept the Windows administrator (UAC) prompt.

Read and accept the **License Agreement**.

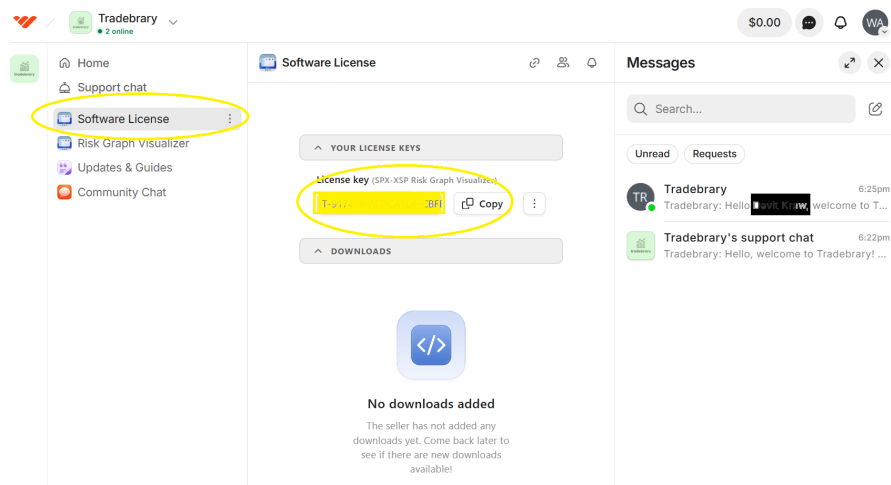

Optionally check **Create a desktop shortcut**.

Click **Install**, then **Finish** — the application can launch automatically.

Step 4 — Activate Your License

On first launch, the application asks for your license key.

Your key is shown on your **Whop membership page** (access it using the e-mail you provided in the checkout process):

— copy it, paste it into the activation dialog, and click **Activate**.

An internet connection is required for activation. The key is bound to this computer. A license key may be activated on up to **two** computers you own (e.g., desktop + laptop).

Step 5 — Start Using the Application

Open the **Quick Start Guide** (Start menu → SPX-XSP Options Visualizer → Quick Start Guide) to set up your first strategy in minutes, or the full **User Guide** for the complete reference.

Updating, Moving, and Uninstalling

- **Updating:** the application checks quietly at startup and lets you know when a newer version is available (you can also check any time via *About* → *Check for Updates*). Download the newest installer from the same link and run it — your settings, strategies, and saved chains are preserved (they live in your Windows user profile, not the install folder).
- **Moving to a new computer:** in the app use *Help* → *License* → *Deactivate this device* (or reset the key from your Whop membership page), then install and activate on the new machine.
- **Uninstalling:** Windows Settings → Apps → SPX-XSP Options Visualizer → Uninstall. Application data is removed; your license remains usable for a future reinstall.

Note: Documentation and legal documents are installed under the application's Docs folder and in the Start menu group.
